Attention: Director of Certification

RE: Analysis of RF Exposure for Portable and Mobile use per KDB 447498 D01 Mobile Portable RF Exposure v05r02 and RSS-102 Issue 4 March 2010

FCC ID: XTE-ULP210

Mobile MPE Calculation Summary using a $\underline{65cm}$ separation distance (with a directional antenna for sectorization model HG2417P-090, Antenna gain is = 17 dBi):

Mode	Output Power	Power Density (mW/m²)
High CH 2475.63MHz	29.81 dBm	0.1985

1. Co-Located Transmitters transmission table:

Transmitter type		Transmitter type that can transmit at the same time		
	Sectorized AP	Sectorized AP		
	Note The EUT Consist of 2 AP's with a directional antenna for sectorization (FCC ID#: XTE-ULPAP210).			
	Directional Antenna gain is = 17 dBi model HG2417P-090).			

2. Simultaneous Transmission MPE (worst-case):

Transmitter type	MPE (mw/cm²)	Limit (mW/cm²)	MPE ratio (MPE/Limit)
2402 MHz to 2475.63 MHz	0.9036	1.0	0.9036
Sum of the ratios (should be <1.0)			0.9036

3. Mobile MPE Calculation using a 65cm separation distance (:

Using Power Density formula:

$$S = \frac{PG}{4\pi R^2}$$

where: S = power density

P = power input to the antenna

G = power gain of the antenna in the direction of interest relative to isotropic

R = distance to the center of radiation of the antenna

Maximum peak output power at antenna input terminal: 29.81 (dBm)

Maximum peak output power at antenna input terminal: 957.19 (mW)

Antenna gain(typical): 17 (dBi)

Maximum antenna gain: 50.119 (numeric)

Prediction distance: <u>65</u> (cm)

Sourse Based Time Average Duty Cycle: 100 (%)

Prediction frequency: 2400 (MHz)

MPE limit for uncontrolled exposure at prediction frequency: 1.000 (mW/cm²)

Power density at prediction frequency: 0.9036 (mW/cm²)

Power density at prediction frequency: 9.036 (W/m²)

Margin of Compliance: 0.44 (dB)

Sincerely,

Juan Manuel Gonzalez
